

IN STEP CARBON AFO - POSTERIOR LATERAL

AF-200

The IN STEP Posterior Lateral AFO is designed to increase ankle and knee stability when there is mild to moderate ankle weakness. The contoured footplate allows for smooth roll and progressive stiffness to slow tibial progression yet remains stable in the coronal plane. This design can be utilized with a custom foot orthosis for increased control. The material matrix provides a durable and lightweight design, with a Calf cuff for support. Posterior - Lateral strut offers a low-profile aspect that fits inside almost any shoe. Easy application, and footplate can be trimmed to fit. Weight Limit is 220lbs.

INDICATIONS

IN STEP is ideal for patients with:

- Excessive plantar flexion during swing phase (secondary to weak dorsiflexors)
- Weakness of the pretibial muscles $\leq$ Grade 3 MMT
- Mild weakness in calf muscles Grade 3⁺ - 4⁺

2 Year Warranty with Registration

P/N	DESCRIPTION	SIZING (Foot plate can be trimmed)
