Spike Sole and Foot Cover
Spike Sole and Foot Cover

Spike sole and Foot cover are developed under the collaboration between IMASEN Engineering Corporation and Mizuno, Japanese sport product manufacturer. They are specially designed for prosthetic runners to be used for Track & Field activities.

They reduce the extra work required to mount the sole in a prefabricated running shoe. The user can easily change the soles when necessary..

**Unique Alignment of spike pins**

The spike pin alignment is specially designed for prosthetic users. The front pin of the toe is very important for prosthetic runners.

**Boa®**

Boa systems enable users to don and doff the foot cover easily. Also, it leads to secure setting of foot cover over the running blade.

**The thinness and lightness**

The thinness makes it possible to transfer the energy return directly from the running blade. The lightness is another advantage to other spike soles.

**Dual structure of the sole for high cushion and grip performance**

EVA and rubber foot cover allows a great fit on the running blade and leads to high cushioning and gripping on different ground surfaces. The thickness is designed to match to the sound side shoe sole.
